DDV^M LANDSCAPES

The ultimate data immersion experience. Users can navigate rich narratives for data discovery, analysis and activation.

- Multi-screen sync
- Sharing control
- Exchange integrity

Keep in Touch

LICHEN

Build your own **DDV™** Landscapes. All things data within a data native UX. For users at all learning stages.

- Browser enabled
- 1000+ modules
- Easy publishing

Keep in Touch

DDV[™] NEST

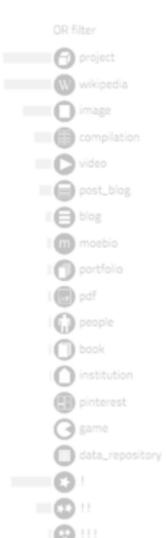

Extreme power with maximum simplicity.
Self-service analytics on a compact package.
Empowering end users to explore and activate the data.

- Easy drag-and-drop interface
- Compared analysis and filtering
- Granular import and export

Our Mission

Unleash data value for intelligence and monetization.

Our Technology

DrumWave is a full-stack technology company in the forefront of Artificial Intelligence, Data Monetization, Visual Data Science and Dynamic Data Visualization (**DDV**™).

Drumwave's DDV™ ecosystem sets a new standard for the way data is collected, analyzed, packed, visualized and exchanged. With extreme modularity, data value engineering resources and a full-stack approach - all within a unique data native UX - we empower organizations and users to better control and manage data by acknowledging ownership and respecting privacy.

The Problem we solve and the value we bring:

The monetization of the data will transform technology, its rules of engagement, and the way we understand business. It is now evident, the lack of transparency and education for all things data is pushing our society towards a steep learning curve about the data business. Questions on how it is produced, distributed and consumed are going to be in the core of the most important discussions of our society.

Organizations run on terabytes of valuable data and they want to be able to better access this value. Users want to find ways to protect and manage their share of this value as consumers. **Drumwave** is here to help both on every step of the way towards a data driven society.

By providing tools and the environment with the highest standards for data transparency, management and exchange we are making it faster, simpler and safer to organizations, data scientists, developers and users to participate in this change.

APPLICATIONS:

- TELECOM
- HIGH-TECH
- IoT
- MEDIA
- INTERNET PUBLISHING
- TRADE PROMOTION OPTIMIZATION
- MARKETING
- E-COMMERCE
- FINANCE
- HEALTH
- CONSUMER BEHAVIOR
- DATA COMPLIANCE
- UTILITIES
- SECURITY
- FRAUD ANALYSIS
- GOVERNMENTS
- EDUCATION

Our main interests right now:

- Consolidation of the data ecosystem
- Inside-out enterprise Digital Transformation
- Data usage regulation and compliance
- Artificial intelligence impact on data value cycle
- Data monetization regulation
- Consumer privacy and protection
- Education for data

Why to monetize data?

Data is a "product" like any other. It is the most valuable asset humankind have created.
